(54) CLIP FOR LOCKER ARM

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a clip capable of effectively preventing generation of rattling against a locker arm furnished with an upward semi-spherical pivot part on one end in the longitudinal direction and an upper end part of a tilting support part in correspondence to it of which has a semi-spherical structure.

SOLUTION: The clip 50 for the locker arm to be used to fit the upward semi-spherical pivot part 16 furnished on the locker arm 10 on a lash adjuster having a semi-spherical upper end 30a, and is constituted so as to generate spring force to draw the pivot part and the lash adjuster to each other by respectively providing a roughly circular cutout 51a to be engaged against the pivot part with its upper plate 51 and a cutout 52a to be engaged against a lower side position of an upper

end of the lash adjuster with a lower plate 52, and by engaging the upper plate cutout with the pivot part and the lower plate cutout with the lash adjuster.
